1	Executive Summary
2	Problem Statement

1. Executive Summary

The YMCA Class Attendance & Scheduling System is designed to replace all spreadsheet-based processes currently used to track instructor activity, class schedules, and attendance metrics across YMCA branches. This platform introduces an integrated, mobile-first approach that supports instructors, managers, and leadership through accurate, real-time data capture and streamlined workflows.

2. Problem Statement

Current YMCA operations rely heavily on manual, spreadsheet-driven attendance tracking and scheduling practices. These methods produce inconsistent reporting, create administrative burden, and limit operational visibility. A centralized digital solution is required to support accurate data capture, optimize workflow efficiency, and enable informed decision-making.
